

# CitSci4All

**Social Inclusion and Participation of Deaf and Hard of Hearing adults in Citizen Science for Climate Change.**

## What is Citizen Science?

It is the practice of the public's participation in scientific research.

The public can participate in a number of ways, for example by **collecting or monitoring data** for the purposes of a scientific cause or research.

Climate change, as one of the most significant threats to humanity, necessitates **everyone's involvement** in climate action.

Citizen Science can empower participants to become **active agents of environmental change** in their community.

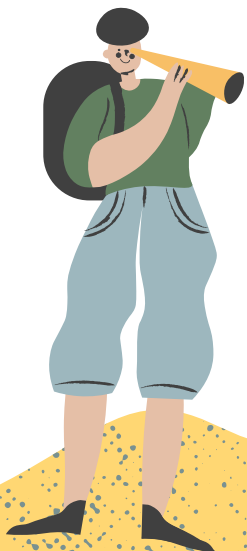

The lack of adequate provisions for the participation of people with disabilities, like the Deaf and Hard of Hearing, makes participation in climate action **inaccessible**.

## What is Citizen Science 4 All?

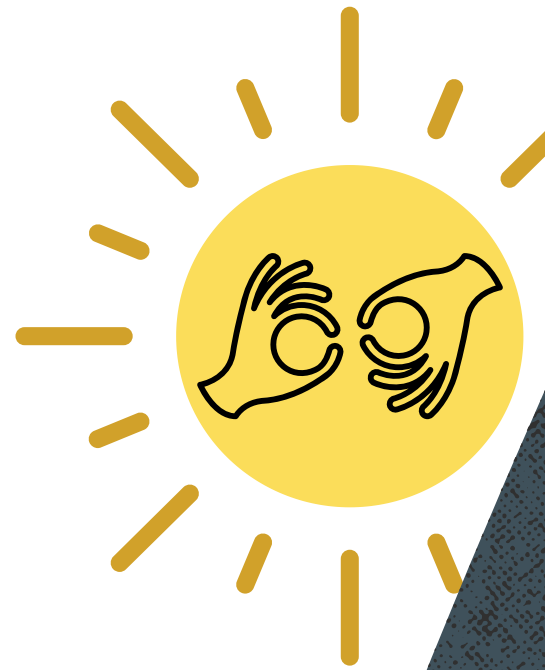

Citizen science as a means for social and environmental justice.

CitSci4All centers on the inclusion and active participation of the Deaf and Hard of Hearing community in matters of climate change, as a means of exercising the right to equal participation in societal life.

# What will the project offer?

- A Guide on DHH adults' engagement in citizen science projects for climate change
- A customized Citizen Science Toolkit for DHH trainers
- It will facilitate DHH adults in engaging with and implementing citizen science projects for climate change.
- A Report will reflect on those lessons learned through the inclusion of DHH adults in citizen science projects for climate change, whilst paving the way towards more inclusive participation in citizen science.
